

## STS - STOCKMAN TELEMETRY SYSTEM

The STOCKMAN TELEMETRY SYSTEM (STS) has evolved from our original "Talking Tank Monitors" over the last 15 years and is based on tried and proven GME UHF Transceivers - a brand used & trusted by many landowners.

We offer the ability to remotely control and monitor many stock water functions - tank & trough levels, pump & genset control, flow meters and much more - and over great distances.

STS allows monitoring points to be used to extend the range of the system by forwarding information onto the next unit in the chain - the alleviates the issue of the otherwise restricted range of UHF CB technology. We can even make use of existing UHF CB repeaters due to our use of "SELCALL" instead of "data" to send information

STS is simple & reliable - and proven by over 15 years of in-field development experience.

Contact us for an info pack today.

Other uses for the STS include:

- Electric fence monitoring
- Building & gate security
- Weather stations
- Irrigation control

Other uses only limited by your imagination!
